CRICKET PLAYERS PERFORMANCE TRACKING APPLICATION: CRICKSTATS

1. Introduction

Cricket is one of the most popular sports in India. Tracking player performance manually can be difficult and time-consuming. This project proposes a **Cricket Player Performance Tracking Application** that helps coaches and teams record, analyze, and evaluate player statistics such as runs, wickets, strike rate, and average.

The application allows users to store player data digitally and generate reports for performance improvement.

2. Objective

The main objectives of this project are:

- To create a system to **record player performance statistics**
- To **analyze batting and bowling performance**
- To **store player data in a database**
- To provide **easy access to player records**
- To help coaches **select players based on performance**

3. Key Features

Main features of the application include:

Player Management

- Add new players
- Edit player details
- View player information

Match Entry

- Record match details
- Enter batting and bowling statistics

Performance Analysis

- Calculate batting average
- Calculate strike rate
- Calculate bowling **economy** rate

Reports & Dashboard

- Player performance reports
- Match statistics
- Graphical charts

4. Modules of the Project

1. Login Module

Allows the admin or coach to log into the system securely.

Functions:

- Username & password authentication
- Access control

2. Player Registration Module

Stores basic information about players.

Data stored:

- Player ID
- Player Name
- Age
- Team
- Role (Batsman/Bowler/All-rounder)

3. Match Details Module

Stores match information such as:

- Match ID
- Date
- Opponent team
- Venue

4. Performance Tracking Module

Records statistics for each player.

Example data:

- Runs scored
- Balls faced
- Wickets taken
- Overs bowled

Reports can be displayed using **tables and charts**.

5. Performance Report Module

Generates statistics including:

- Batting average
-
- rate
- Total runs
- Total wickets

Target Users

● Team Managers

● Coaches

● Analysts

● Salesforce Admins

Empathy Analysis

Aspect Description

● Think & Feel: Need accurate data, better insights

● Hear: Feedback from management

● See: Multiple data sources

● Say & Do: Collect statistics manually

● Pain: Data errors, delays

● Gain: Faster decisions, automation

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Journey Stages:

- Login
- Enter Player Data
- Record Match Performance
- Generate Reports
- Analyze Results
- Decision Making

Non-Functional Requirements (NFRs) – CRICKSTATS

NFR-1: Usability

The system should be easy to understand and use by coaches, managers, analysts, andadmins without requiring technical training.

Requirements

- Simple and intuitive user interface
- Clear navigation menus
- Easy-to-read dashboards
- Minimal learning curve

Examples:

- A new coach should be able to:
- Log in
- Enter match data
- View player reports
- within a few minutes without special training.

Example:

The Salesforce Lightning interface provides drag-and-drop dashboards and
user-friendly forms.

NFR-2: Security

The system must protect sensitive player data from unauthorized access.

Requirements

- Role-based access control
- Secure authentication
- Encrypted data storage
- Regular backups

.

Examples:

- Coaches can view player statistics
- Managers can edit records
- Analysts can generate reports
- Only admins can modify system settings

Example:
Salesforce Profiles and Permission Sets restrict access to confidential
information.

NFR-3: Reliability
The system should function correctly without failure and store data accurately.
Requirements

- No data loss
- Automatic backups
- Error handling
- System stability

Example:

If a manager enters match statistics and loses internet connection, the data should be
saved automatically when reconnected.
Salesforce cloud backup ensures recovery in case of system failure.

NFR-4: Performance

The system should respond quickly and handle large volumes of data efficiently.
Requirements

- Fast page loading
- Quick report generation
- Smooth dashboard rendering
- Minimal response time

Example:

When an analyst generates a performance report for 100+ players, the report should loadwithin 2–3 seconds.
Optimized Salesforce queries and caching improve response speed.

NFR-5: Availability

The system should be accessible whenever users need it.
Requirements

- 24/7 system availability
- Minimal downtime
- Cloud-based access
- Disaster recovery

Example:

Coaches should be able to access CRICKSTATS even during tournaments at night or on
weekends.
Salesforce provides high uptime with cloud hosting.

NFR-6: Scalability

The system should support increasing numbers of users, players, and records.

Requirements

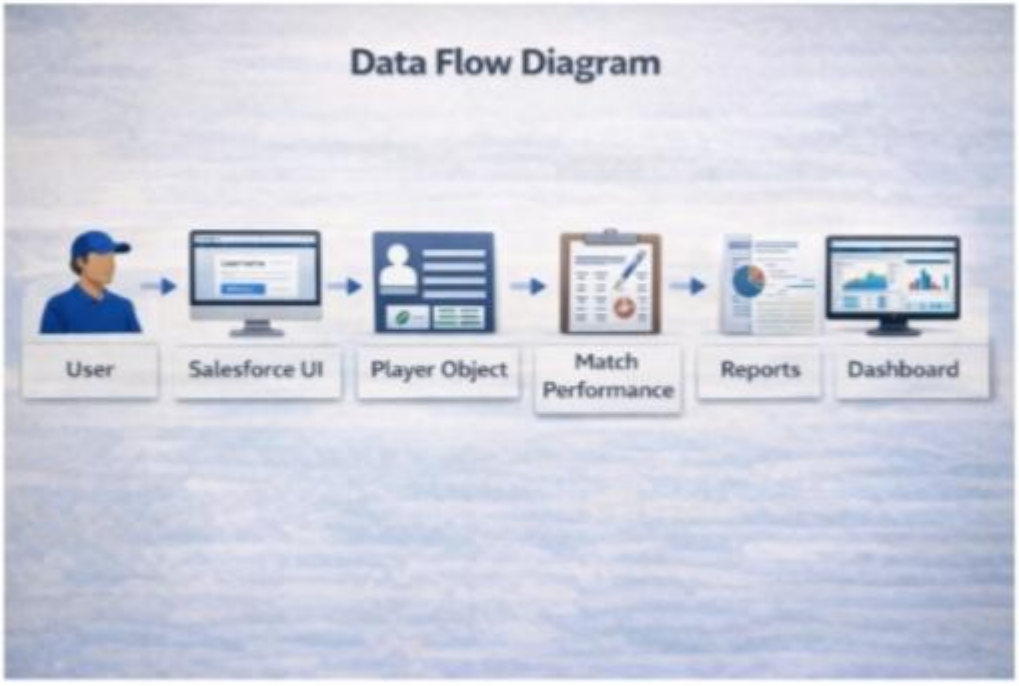
- Handle growing datasets
- Support more teams and leagues
- Expand storage capacity
- Maintain performance under load

Example:

If CRICKSTATS is extended from one team to 50 teams, the system should still performsmoothly.
Salesforce cloud infrastructure automatically scales storage and processing.

Data Flow

User → Salesforce UI → Player Object → Match Performance → Reports → Dashboard



Player Object

1. In your Salesforce org, click gear icon on the top left and select Setup to open
Setup.

2. Click the Object Manager tab. If you don't see it, enter Object Manager in the
Quick Find box.

3. On the Object Manager page, click Create | Custom Object.

1. From the setup page → Click on Object Manager → Click on Create → Click on
Custom Object.

● Label : Player
● Plural Label : Players
● Enter Record Name Label and Format
Record Name : Player Name
Data Type : Text

● In Optional features : check the boxes for Allow Reports | Allow Activities
| Track Field History.
● Search Status : check the box for Allow Search.
● Save

Activity 2 : Match Performance Object

1. From the setup page → Click on Object Manager → Click on Create → Click onCustom Object.

● Label : Match Performance
● Plural Label : Match Performances
● Enter Record Name Label and Format

Record Name : Customer Account Name
Data Type : Text

● In Optional features : check the boxes for Allow Reports | Allow Activities
| Track Field History.
● Search Status : check the box for Allow Search.
● Save.

Player Object
1. In your Salesforce org, click gear icon on the top left and select Setup to open
Setup.

2. Click the Object Manager tab. If you don’t see it, enter Object Manager in the
Quick Find box.

3. On the Object Manager page, click Create | Custom Object.

1. From the setup page → Click on Object Manager → Click on Create → Click on
Custom Object.

● Label : Player
● Plural Label : Players
● Enter Record Name Label and Format
Record Name : Player Name
Data Type : Text

● In Optional features : check the boxes for Allow Reports | Allow Activities
| Track Field History.
● Search Status : check the box for Allow Search.
● Save

Activity 2 : Match Performance Object

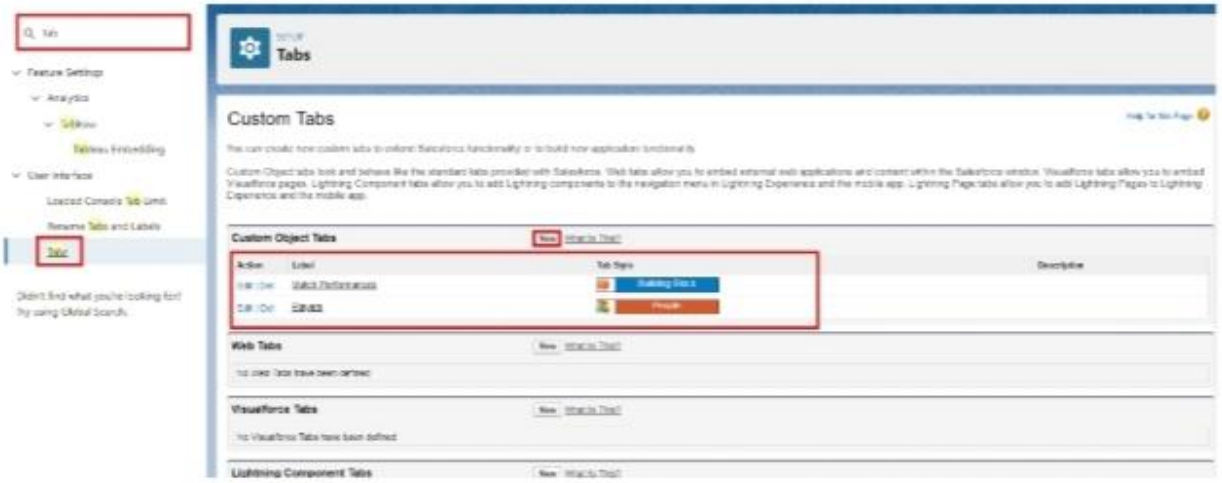
1. From the setup page → Click on Object Manager → Click on Create → Click on
Custom Object.

● Label : Match Performance
● Plural Label : Match Performances
● Enter Record Name Label and Format

Record Name : Customer Account Name
Data Type : Text

● In Optional features : check the boxes for Allow Reports | Allow Activities
| Track Field History.
● Search Status : check the box for Allow Search.
● Save.

9. Repeat the same steps for Match Performances.



7. FUNCTIONAL & PERFORMANCE TESTING

During the testing phase, screenshots were captured from the Salesforce Lightning userinterface to verify the correct functioning of all implemented features in theCRICKSTATS system.

These include record creation for Player and Match Performance objects; validation rule checks for mandatory fields, score limits, and input constraints;verification of record type behavior for Domestic and International match categories; and flow execution for automatic updating of player statistics and data consistency.

In addition, system performance was evaluated by monitoring response time during dataentry, report generation, and dashboard loading.

The application was tested undermultiple user interactions to ensure stable performance without delays. Screenshots of generated reports and interactive dashboards were documented to confirm accurate datavisualization, real-time updates, and reliable performance tracking.

These testingactivities ensured that the CRICKSTATS platform met both functional and performance requirements and was ready for deployment.

NOTE : Enter some records in the Player Object and Match Performance Object to get the results.

9. Conclusion:

CRICKSTATS successfully implements a cloud-based cricket performance trackingsystem using Salesforce. The system automates data management, improves reportingaccuracy, and supports informed decision-making.

The project demonstrates practical application of SDLC, Agile methodology, andCRM-based development.

10. FUTURE SCOPE

- Mobile application integration
- AI-based performance prediction

- Video analysis integration
- Player ranking system
- Public statistics portal
- Multi-league support

11. APPENDIX

- Salesforce Objects & Fields
- Manual match statistics
- Flow Configurations

THANK YOU
